***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/10/08 has been entered.

***Allowable Subject Matter***

Claims 2, 3, 8, 9, 14 and 15 are allowed.

The following is an examiner's statement of reasons for allowance: U.S. Patent 6,323,108 to Kub et al. teach (See Figure 1 and related discussion) a manufacturing method of a bonded substrate having its final active layer thickness of 200nm or less comprising etching a layer on a support substrate, the layer being a layer formed over the support substrate by cleaving off a portion of a wafer, to control the thickness of the layer, the etching being carried out using a solution having an etching effect so as to etch in a range of 1nm to 1 $\mu$ m. Kub et al. teach KOH is used to etch silicon, but do not expressly teach an etching solution comprising ammonia and hydrogen peroxide of pH 9 or higher. JP 03219000 A to Otsuka et al. teach KOH and ammonia-hydrogen peroxide are old alternatives for alkaline silicon etching. Kub et al. in view of Otsuka et al. fail to teach or render obvious a manufacturing method of a bonded substrate having a final active layer thickness of 200 nm or less comprising heat treating the cleaved bonded substrate to enhance bonding strength between the active layer wafer and the support substrate as recited in the context of Claim 2.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
